

BSL BREADBOARD (BSL-BBOARD)

This breadboard is required for BSL *PRO* Biomedical Engineering Lessons, such as [ECG Signal Processor Lesson Set H25-H26](#) and [H40 EMG-Controlled Robotic Arm Lesson Set H40](#).

The breadboard is included in: BSL BME Systems, BSLBME-ROBOT-HW, and BSLBME-ROBOT-TA.

It is now offered separately from the BSL-BMEACC kit to allow instructors or students to replenish consumables (resistors, capacitors, ICs, and wire kit) without requiring an extra breadboard.
