

VizMove PRISM

VizMove PRISM is an immersive training environment

An all-inclusive solution with software, hardware, installation, training, and support in one product.

Easy to use—Augment your training classroom with unforgettable realism. You capture real world scenes and bring them into your training space without technical expertise, allowing you to immerse trainees in specific, realistic scenarios to improve preparedness without exposure to hazards.

Integration—With PRISM all it takes is one button click to create and use content. Trainees can touch walls or select in the environment with a controller while the surround sound system adds realistic auditory cues. You can also integrate different types of lighting and scents to enhance the simulation, as well as any physiological data acquisition system.

Benefits—Convert any room into a content-rich learning environment, saving on time and cost. Train individuals or groups in an interactive space while customizing content based on training objectives. No obtrusive equipment allows for easy physiological data collection.

Adaptable Configurations—All VizMove PRISM systems are modular and extensible. Choose between a single, dual, triple, or quad configuration that works best for your training environment.

PRISM Features

- Adaptable
- Easy-to-use
- Immersive training environments
- Integrates easily with other systems
- Single, Dual, Triple & Quad setup options are available

PRISM + Biofeedback Utility:

- Add **VizMove PRISM** to any existing **MP Research System**
- Includes **AcqKnowledge** Biofeedback Link (NDT license required) to tightly synchronize events in immersive world with participant's physiological responses
- Change the VR world based on participant responses

PRISM + MP System with wireless BioNomadix + Biofeedback Utility:

- Complete VR System
- **MP Research System**
- **AcqKnowledge** Biofeedback Link (NDT license required)
- 2 x BioNomadix (user's choice)
